

INGEMAR

Maritime Engineering

MARINA D'ITALIA

To celebrate 35 years of activity by the Ingemar Group and 10 years of partnership with the Fiera di Genova, which we supply the floating structures to for the International Boat Show, we produced an easy-to-consult booklet in collaboration with Panama Editore and Giornale della Vela summarising the excellent quality of Italy's recreational yacht facilities. This is a practical booklet full of useful and detailed information about the 240 most beautiful and well equipped marinas along the Italian coastline.

2014

Excerpt from *Il Giornale della Vela*

Floating pontoons
Steel: strength and versatility

Floating piers
Surfaces and solutions for all needs

Floating pontoons
All concrete: the evolution of fixed piers

Floating pontoons
Aluminium on concrete: luxury on steady basis

Floating breakwaters
20 x 6 x 2.4 m - 130 t: the largest off the shelf

Made in Italy

Pontoons, breakwaters, piers for super yachts, floating bridges and constructions: the best solutions for connecting sea and land by means of strong and reliable structures, in aluminium, concrete or steel, standard or tailor made.

by Ingemar

INGEMAR
Pontoons and constructions over the water

ADV campaign 2014

Genova - Italy, 53th International Boat Show

35 years of Ingemar Group's activity and 10 years' partnership with the Genoa Boat Show: you are invited to celebrate with us by "visiting" Italy's most beautiful marinas

A lot of water has passed under our floating pontoons since we began operations 35 years ago: for this year's Genoa Boat Show, which celebrates the 10th anniversary of our technical partnership with the organizers, we decided to offer to all our friends and supporters this small publishing project, produced in collaboration with Panama Editore, which takes a close look at our world.

Italy's recreational yachting sector, following the worrying fall in numbers over the last few years, is gradually recovering thanks to a series of investment programmes aimed at expanding harbour moorings and updating the quality of the services on offer to meet the demands by the yachting public. On an international level the increase in the numbers of marinas continues at a fast rate, mainly due to the strong growth of yachting in emerging

countries and the enlargement and upgrading of structures in the older and more traditional locations. The astonishing rate of growth in the mega yacht sector means adapting existing marinas to meet their specific requirements as well as creating new facilities, particularly in the Mediterranean Sea and along the Caribbean and Middle East coastlines.

We owe special thanks to all those who have shared with us the past 35 exciting years developing recreational yachting in our country and who have contributed to the realisation of our dreams allowing Ingemar to become a Group proudly representing the professionalism expertise and quality of the Made in Italy trademark throughout the world.

Happy reading to all and... fair wind and calm seas!

Ingemar installs floating pontoons - in the desert!

Khieran - Kuwait

KHIRAN, KUWAIT

Growth continues in the basins of the new city on the Arabic Gulf

La’ala Al-Kuwait Sabah Al-Ahmad Sea City, 85km south of Kuwait City, is an astonishing project in several stages begun in 2003 and occupying an area of over 64 km² along the Arabic Gulf; with a 25 year development plan a new city for in excess of 100,000 inhabitants will arise from nothing along more than 200km of new coastline overlooking a series of canals and lagoons excavated out of the desert.

The project, by the La’ala Al-Kuwait Real Estate Company, has seen completion of the first 3 phases of infrastructures and residential plots and includes the development of two new marinas, the first of which is already close to completion, for more than 1,200 berths.

In 2013, following a stringent international selection process, Ingemar was appointed to manage the final design and supervise on-site construction of the pontoons, fingers and floating breakwaters, and the additional accessories and the anchorage systems for the first marina. It was also appointed to supply all specialist structures and walkways.

The “numbers” for the two basin projects are truly impressive: 17km of floating pontoons and fingers anchored by over 830 piles will provide moorings for over 1,200 yachts up to 40m in length. Construction of the structures is under way and will continue for a further two years.

Casting of the floating pontoons and breakwaters, 3-4m wide and up 20m long and of the fingers up to 30x3m is working at full pace and close to completion for the first marina. The elements are of all-concrete continuous floating type with galvanised rebar and have expanded polystyrene cores assuring flotation.

This is an extremely prestigious international assignment rewarding Ingemar’s attention to the Middle East market and their capacity to adapt to the specific requirements of each client-investor in the role of reliable technical partner and supplier.

KINGDOM OF SAUDI ARABIA

A new series of landings for the Saudi Coastguard on the coastline of the Red Sea and the Arabic Gulf are being installed

Ingemar’s cooperation continues with the Saudi Ministry of the Interior to renovate their Coast Guard bases and to create new mooring locations along the country’s coastline. Following the positive reactions of previous supply contracts, in part still being installed, Ingemar has won another contract to supply and install 5 new landings, three on the coast of the Red Sea and two on the Arabic Gulf.

The new landings are similar to the previous ones but with different solutions relating to the characteristics of the systems for installation which are designed according to the specific site. A modular layout which can be progressively enlarged and replicated at other sites, maximum structural resistance for use in locations not perfectly sheltered, are again the common and most important aspects of these landings.

The anchorage systems will differ in relation to the specific features of each location: pilings fixed to the seabed, sliding devices, vertical beams fixed to the piers and connecting rods anchored to reinforced concrete blocks placed on the rock revetment of the quay are all some of the alternative solutions which are designed ad hoc for each installation.

The structures are built of the Heavy Duty type made of aluminium alloy or, where wave conditions are rough, of painted galvanised steel. The floating units are in concrete or rotomoulded polyethylene according to the specific conditions of each site. Each new landing will have moorings for 8 fast patrol vessels.

The structures, designed for easy transport in containers, will be constructed in Italy on the express instructions of the client: this is yet another indication of the appreciation of Ingemar’s ‘Made in Italy’ quality and their capacity as designer and general contractor within the difficult but promising Saudi market.

Jeddah - Kingdom of Saudi Arabia

AL FAW - IRAQ

A new hub for maritime traffic in the Arabic Gulf is under construction

On the estuaries of the Tigris and Euphrates a gigantic port complex is being constructed which will serve as a junction for maritime traffic in the entire Arabic Gulf. Ingemar has been appointed to supply a series of floating pontoons in reinforced concrete of very high displacement to moor service and working vessels. The modules are being produced at La’ala Al-Kuwait Sabah Al-Ahmad Sea City in Kuwait and are designed and built under the supervision of Ingemar in the same construction yard

Al Faw - Iraq

where the floating structures for the marinas of the new macroscopic settlements are currently being built and which are also designed with floating elements and Ingemar’s expertise. The sections, with dimensions of 20x4x2m, weigh 65t, have an a very high freeboard of 80cm to meet the specific requirements of the vessels at their moorings and have a draft of 1.2m so as to guarantee an efficient attenuation of the wave motion created within the great port basin. The modules will be transported to Iraq on special barges and anchored to the seabed by huge pilings.

TIVAT, MONTENEGRO

The “Monte Carlo of the Adriatic” expands - a popular destination for the elite

Porto Montenegro, inaugurated in 2009, has seen gradual growth each year in its mooring availabilities. At the beginning of 2014 the second part of works, Phase 2, was begun including new structures on land and a radical enlargement of the marina overlooking the spectacular Bay of Kotor, a Unesco World Heritage site. The opening of the Regent Porto Montenegro Hotel at the beginning of August coincided with the completion of the installation of new floating pontoons. To the existing 250 berths, from 12 - 150m, a further 185 have been added, 50 of which for yachts of over 50m in length.

Ingemar continues to be a reliable partner for client-investors and for this new extension has completed, on behalf of the Montenegro firm Yu Briv (the main contractor for all works of Phase 2), approximately 600m of new pontoons of 2.5, 3 and 4m widths. Four long fingers at right angles to the external fixed pier will allow the mooring of 97 mega yachts up to 25m long, while the other pontoons parallel to the wharves will be for smaller yachts, fuel stations and the marina’s service vessels. With this final delivery Ingemar completes the supply of its extensive range of products and technical solutions in the breath taking setting of this amazing residential port development in Montenegro. The marina is largely protected by floating breakwaters, the yachts are moored to pontoons and jetties of different sizes and functions, the piers are surrounded by floating and fixed made-to-measure structures and the berths have service stations, firefighting terminals and pump-out systems.

Anchorage of the structures to the sea floor are also differentiated: chains and deadweights, fixed pilings to the seabed and sliding devices, vertical beams fixed to the quays. These are an exhaustive testimony to Ingemar’s design versatility, flexibility and diversification for their construction projects.

Tivat - Montenegro

The use of eco-friendly floating pontoons and oversize breakwaters increases in Italy

The “challenge at sea” for the Ingemar Group continues: in 2014 they were key players in many enchanting Italian coastal sites. Production at their factory in Casale sul Sile (Venice) proceeds at a fast pace with some of their most important commissions from the north to the south of Italy.

SISTIANA (TRIESTE)

Apartments, villas and a marina on the site of an old quarry

Work is nearly completed at Porto Piccolo, with an investment of €250 million to redevelop the Bay of Sistiana, near Trieste, and build a small village of 460 houses on the site of an old limestone quarry, facing the sea and now transformed into a modern marina with 120 berths for yachts from 8-32m.

Ingemar was appointed by Rizzani de Eccher, the main contractor, to design, construct and install all the floating structures for the marina and the relevant anchoring system: a custom-made assignment.

The pontoons, with an overall surface area of approximately 1800 sqm, are 2.5/3m wide and are all supplied with fingers for mooring yachts up to 32m. A large floating platform acts as a main focal point of the marina giving access to the largest berths. All the elements, with decks in exotic hardwood, have lengths, form and variable features according to the complex layout and the different requirements of the vessels. The structures are anchored by 65 pilings drilled into the rock bed so as to guarantee maximum safety and function of the floating systems. This is a prestigious turnkey assignment for an important international group, accomplished in only 4 months and in a climate of enthusiasm and cooperation with all the other exponents of this futuristic initiative.

Venezia - Italy

VENICE

More berths thanks to floating breakwaters

The sailing hub VdV (Vento di Venezia) was created in 2003 and has been crucial to the revival of the Isola della Certosa, one of the most evocative places on the Lagoon and just a few stops by vaporetto from Piazza San Marco.

Since then the number of berths has increased with the addition of new moorings as well as service and hospitality facilities, and also has a shipyard with boat storage.

This year important new works have been added: a barrier with high displacement floating breakwater sections, 4m wide by 20m length and weighing 70t, for protection against wave motion, as well as a new series of pontoons with fingers all of which makes the VdV hub a true floating boatyard on the island overlooking Venice.

The work involved dredging the sea bed in some areas as well as moving and modifying the mooring pontoon for the vaporettos on the south side of the basin.

The new harbour layout, complete with all services and destined principally for mooring mega yachts, has 11 new berths up to 35m in addition to the 300 existing berths of 10m to 35m.

This continues the collaboration between VdV and Ingemar, begun in 2006, and is a superbly satisfying work experience with the reward of seeing an abandoned area on the island transformed over time into a modern and lively international sailing centre.

Sistiana (TS) - Italy

Savona - Italy

SAVONA

New floating pontoons for the Lega Navale

The Lega Navale di Savona boasts a long tradition of sporting success and for years has been active in promoting sailing in general but also sailing for the disabled. The premises, with access for the disabled sponsored by the “The sea is for everyone” project, and numerous boats equipped for people with special needs as well as free sailing courses, is a feather in the cap for this dynamic partnership which pays great attention to social issues.

Ingemar is particularly honoured to have contributed to the club's development by substituting all the old moorings: three new fingers for floating pontoons have been in operation since the spring of 2014 to moor the club members' boats. This was an important occasion for Ingemar to renew cooperation with the Lega Navale Italian Naval League and with whom they share the objectives of promoting a love for the sea as well as focusing attention on social issues.

has appointed Ingemar to design and execute the construction of a floating walkway to cross the old moats and provide pedestrian access from the town centre to this historic site. The new bridge will be similar to the one installed by Ingemar in 1996 which crossed the moats by the Fortezza Nuova (the New Stronghold): this time however the opening of the bridge to allow boats to pass across will be motorised and activated by remote control. This openable pedestrian bridge will be 35m long and 2.6m wide and the central section will retract telescopically leaving an opening of 7.5m for the passage of boats. Approaching boats will receive both acoustic and visual warnings at the canal entrance and along the canal close to the bridge. This is yet another example of Ingemar's versatility in maritime engineering.

Bari - Italy

BARI

Barion Sporting Club upgrades its moorings

The “Circolo Canottieri Barion Sporting Club” has completed an important series of renovations to its historic clubhouse situated on the city seafront: this includes the upgrade and enlargement of the moorings for their members' yachts.

Ingemar pontoons have been in operation there for more than 20 years but since then yacht sizes have increased considerably; pontoons and services needed to be adapted to the latest requirements and the more modern standards of health and safety.

Ingemar's long-standing collaboration with the Club has generated an order to construct a new finger of pontoons of the King-Size series, 75cm high above water and 3m wide, placed at 90 degrees to the pier. At the seaward end a large floating dock, 4m wide, will lie at a right angle defining the mooring area and sheltering yachts of up to 25m. Because of local maritime conditions, all the floating structures have generous dimensions and are anchored to the seabed with pilings and sliding devices.

Livorno - Italy

LIVORNO

Access to the Fortezza Vecchia via an openable bridge

Amongst the many current improvements to renovate the Fortezza Vecchia (the Old Stronghold), the Municipality of Livorno

INGEMAR: 35 years of competence and successes

Specialist state-of-the-art expertise, important investments in research and development and tens of miles of floating structures all fully operational, are the hallmarks of this internationally appreciated Italian group.

From the Genoa Boat Show to the devotional floating bridge for the Feast of the Redeemer in Venice, from the Marina del Gargano in the south of Italy to Monte Carlo, from Port Gocek in Turkey to Kieran in Kuwait or Aqaba in Jordan, if you walk over a floating pontoon pay attention to the manufacturer's label, it is likely to be "by Ingemar".

Founded in 1979 as a design company in the maritime engineering field to plan and manufacture floating structures destined to help develop tourist ports and harbours, Ingemar has demonstrated from the outset their ability to study and solve all the specific problems posed by these structures with a highly technical approach.

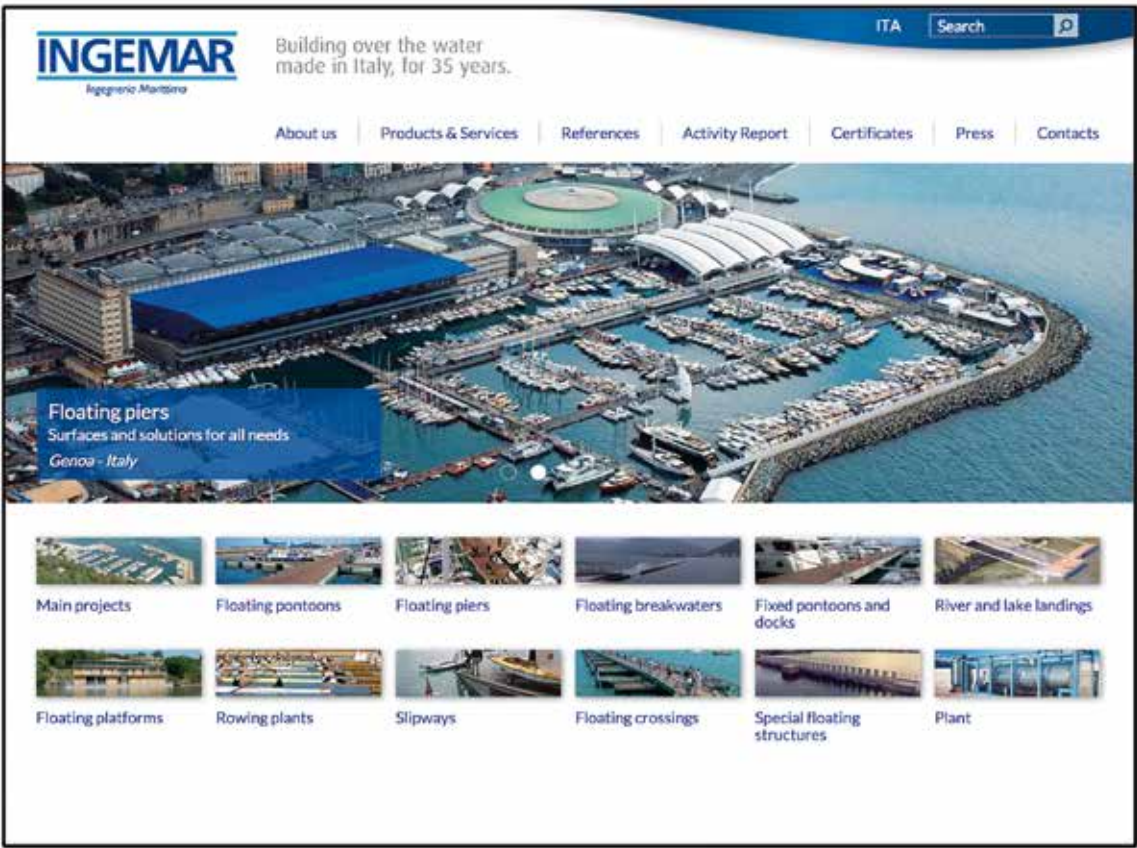

After 35 years these distinctive qualities still constitute their main winning strengths, placing Ingemar Group as the foremost Italian company in the sector and one of the most highly qualified in Europe. Current production is much diversified and includes pontoons, breakwaters and floating platforms for recreational yachts and at

the same time offers a complete range of accessories and all the necessary equipment and services. The company's range of activities, outside the yachting sector, encompasses the design and construction of specialist floating structures for use within the leisure sector, as well as for industry and transport. Materials employed in the production process range from aluminium to specialist steels, from concrete to plastics, from eco-friendly exotic hardwoods to the most recent composite and recycled materials.

Research activity, carried out in collaboration with the most important universities, is aimed at testing new solutions to counter the problems of wave motion, at finding new systems of anchorage to the seabed, at setting up new production processes and even, when the necessity or opportunity arises, transferring production technology for the elements abroad.

Today the Group employs 35 highly specialised staff in its factory at Casale sul Sile, near Venice, with their Head and administrative offices in Milan where it all began - "only" 35 years ago.

Ingemar Group reinforces its presence on the web!
